

TEST CERTIFICATE

Certificate	Date	Picture
INFOCERT 1-14	27/01/14	
SKU	Drawing rev.	
A-11010	rev. 1	
Batch	Origin	
OP-70404	14000	

Tests	Results
Compression breakdown resistance (average value obtained over 3 random samples)	2.58 kN = 262.75 Kg
Test equipment	Calibration
MAE-05 UZF-50 UZF-56	500 002 11/08

This certificate only concerns the samples tested herein and is provided for the sole purpose of having those who will potentially use the product determine if it is compatible with their application. The random samples may not be representative of other products. Due to the characteristics of the materials used and of the manufacturing processes, the characteristics and physical properties therefore may vary from one production batch to another. The responsibility for determining the suitability of the product rest with those evaluating its use, and they shall apply any necessary safety factors for its application. For any critical application, please arrange the features of the test to be performed and the number of samples to be tested. For breakdown resistance tests, in certain cases, we can consider breakdown as a deformation of the product which does not allow it to perform satisfactorily the function for which it was designed originally. For the levelers tests, the load is applied to the screw tip. The load application point may vary in other test results.
